Tutorial

Objective

In this challenge, you'll work with arithmetic operators. Check out the [Tutorial](#) tab for learning materials and an instructional video!

Task

Given the meal price (base cost of a meal), tip percent (the percentage of the meal price being added as tip), and tax percent (the percentage of the meal price being added as tax) for a meal, find and print the meal's total cost.

Note: Be sure to use precise values for your calculations, or you may end up with an incorrectly rounded result!

Input Format

There are **3** lines of numeric input:

The first line has a double, *mealCost* (the cost of the meal before tax and tip).

The second line has an integer, *tipPercent* (the percentage of *mealCost* being added as tip).

The third line has an integer, *taxPercent* (the percentage of *mealCost* being added as tax).

Output Format

Print the total meal cost, where *totalCost* is the rounded integer result of the entire bill (*mealCost* with added tax and tip).

Sample Input

12.00
20
8

Sample Output

15

f

in

$mealCost = 12, tipPercent = 20, taxPercent = 8$

Calculations:

$tip = 12 \times \frac{20}{100} = 2.4$

$tax = 12 \times \frac{8}{100} = 0.96$

$totalCost = mealCost + tip + tax = 12 + 2.4 + 0.96 = 15.36$

$round(totalCost) = 15$

We round **totalCost** to the nearest dollar (integer) and then print our result, **15**.
