|--|------------------------------------|-----------------------|----------|
| Objective | | Author | AllisonP |
| Today, we're discussing data types. Check out the Tutorial tab for learning materials | | Difficulty | Easy |
| and an instructional video! | | Max Score | 30 |
| Task | | Submitted By | 400957 |
| Complete the code in the editor below. The variables $m{i}$, $m{d}$, and $m{s}$ are already declared | | d NEED HELP? | |
| and initialized for y | ou. You must: | □ View to test | |
| 1. Declare $oldsymbol{3}$ variables: one of type int, one of type double, and one of type String. | | ☐ View tutorial | |
| 2. Read $oldsymbol{3}$ lines of input from stdin (according to the sequence given in the Input | | View discussions | |
| Format section below) and initialize your $oldsymbol{3}$ variables. | | View editorial | |
| 3. Use the + operator to perform the following operations: | | View top submissions | |
| 1. Print the sum of $m{i}$ plus your int variable on a new line. | | | |
| 2. Print the sum of $oldsymbol{d}$ plus your double variable to a scale of one decimal place on | | n RATE THIS CHALLENGE | |
| a new line. | | 公公公公公 | |

Note: If you are using a language that doesn't support using + for string concatenation (e.g.: C), you can just print one variable immediately following the other on the same line. The string provided in your editor must be printed first, immediately followed by the string you read as input.

3. Concatenate \boldsymbol{s} with the string you read as input and print the result on a new

Input Format

line.

The first line contains an integer that you must sum with i.

The second line contains a double that you must sum with d.

The third line contains a string that you must concatenate with $oldsymbol{s}.$

Output Format

Print the sum of both integers on the first line, the sum of both doubles (scaled to ${f 1}$ decimal place) on the second line, and then the two concatenated strings on the third line.

Sample Input

```
Sample Output

16
8.0
HackerRank is the best place to learn and practice coding!

Explanation
```

When we sum the integers $\bf 4$ and $\bf 12$, we get the integer $\bf 16$.

When we sum the floating-point numbers 4.0 and 4.0, we get 8.0.

When we concatenate HackerRank with is the best place to learn and practice coding!, we get HackerRank is the best place to learn and practice coding!.

You will not pass this challenge if you attempt to assign the Sample Case values to your variables instead of following the instructions above and reading input from stdin.

```
Change Theme
                        Java 8
15
             /* Declare second integer, double, and String variables. */
16
17
             /* Read and save an integer, double, and String to your variables.*/
18
             // Note: If you have trouble reading the entire String, please go back and
19
     review the Tutorial closely.
20
             /* Print the sum of both integer variables on a new line. */
21
22
             /* Print the sum of the double variables on a new line. */
24
             /* Concatenate and print the String variables on a new line;
25
                 the 's' variable above should be printed first. */
26
